

ABSTRACT

Dump trailer that hitches to a tow vehicle and easily tilts to a dump position when the tow vehicle is backed up toward the dump trailer. The dump trailer has a tow bar assembly that is pivotably mounted on the front end of the trailer and pushes the body of the trailer to a tilted position when the tow vehicle backs up. The tow bar assembly includes an auxiliary wheel, allowing the trailer to be maintained in its horizontal position when not hitched to a tow vehicle. Also included is a work tray that is mounted on the handlebar of a small lawn trailer. An elevation sub-structure is also provided for larger utility trailers, that raises the trailer body so that the dump trailer can be brought to a 45-degree tilt angle for optimal dumping.
